# REVISIONS – DELIVERABLE 2

---

## Scenario 2: Car2Go Rental System

Based on the feedback for deliverable 1, the following changes were made:

- In the business rules, when a car is being returned the company records the tank\_Volume and indicate whether the tank is empty, quarter full, half full, three quarters full, or full.
- The company also keeps track of the day a car was rented and returned
- The attribute driver\_license\_number was removed from the table Car
- The attribute car\_class\_id was replaced by car\_class\_description in the table Car\_class
- The attributes car\_id, pickup\_company\_location and dropoff\_company\_location were included in the table Renting\_Detail
- The table Address was added to the ERD in order to identify the addresses for each record in the tables Customer and Company\_Location, and to satisfy the 2NF from deliverable 1.
